Hair Transplant: Myths vs. Facts

A hair transplant is a safe and effective medical procedure where healthy hair follicles are moved from a donor area (usually the back or sides of the scalp) to bald or thinning areas. This helps restore natural hair growth and enhances your overall appearance.

At **MediSkin Hair Clinic, Pune**, **Dr. Shridevi Lakhe** **(MBBS, Dip. Dermatology)** offers advanced and customized hair transplant treatments designed to deliver natural-looking and permanent results for both men and women.

Benefits of Hair Transplant

Permanent solution to hair loss

Natural-looking results using modern techniques like FUE (Follicular Unit Extraction)

Improves confidence and overall appearance

Minimal downtime and quick recovery

Suitable for both men and women experiencing baldness or thinning

Can be combined with PRP therapy for enhanced growth

Myths vs Facts About Hair Transplant

Myth 1: Hair transplant looks unnatural
Fact : Modern FUE techniques ensure transplanted hair blends perfectly with your natural hair.

Myth 2: Hair transplant is only for men
Fact : Women with hair thinning or bald patches can also achieve great results.

Myth 3: Results are visible immediately
Fact : New hair growth begins within 3–4 months; full results appear in 9–12 months.

Myth 4: Hair transplant is painful and unsafe
Fact : The procedure is done under local anesthesia and is completely safe in expert hands.

Myth 5: Transplanted hair doesn't last long
Fact : Hair taken from safe donor areas ensures permanent and natural growth.
